

## **Implicit guiding for people with dementia (PwD) using light & color**

### **Background**

We conducted studies about guiding PwD in health care facilities. The first results showed that bright light can be a dynamic & implicit cue for guiding PwD. We would like to discover more about the impact of combining favorite & disliked color in this situation.

### **Task**

- Understanding the previous studies.
- Working with a health care facility (PwD, caregivers).
- Conducting the next studies about favorite & disliked color in guiding context.

### **Requirements**

- Interested in PwD, a population which is rarely considered.
- Had experience in conducting experiment.
